Water Tank Rehabilitation Project, Budget Total: \$900,000 **Source:** U.S. Congressional Direct Spending Grant for \$675,000, required Match \$225,000, **Status:** Final Application process with USDA completed. With Cooperation from OHA and Biz Oregon, we qualified for Match funding as 50% grant/50% loan and have been offered terms of 30 years at 1% interest. Simplified PER submitted and approved. We are being told that we could get our funding agreement to sign in late October.

- **Riverview Avenue Distribution Line Replacement Project**, Budget Total: \$1,843,000 **Source:** U.S. CDS (House) Grant for \$1,474,400, required Match \$368,600, **Status:** Application Submitted. I received notification on 04/03, from Rep. Val Hoyle that our proposal has been selected from a pool of 70 proposals; to be one of five that will be considered by the US House Appropriations Committee. The latest update informed me that we have been selected for an appropriation, but the Committee reduced the award to \$746,868.

- **Riverview Avenue Distribution Line Replacement Project**, Budget Total: \$1,843,000 **Source:** U.S. CDS (Senate) Grant for \$1,474,400, required Match \$368,600, **Status:** Application Submitted. Our proposal has been selected to be considered for funding by the US Senate Appropriations Committee. No recent updates.

- **Sewer System Rehabilitation, Hardening and Upgrade Project**, Budget Total: \$1,059,970 **Source:** Economic Development Administration FY2025 Disaster Supplemental Grant Program for \$847,976, required Match \$211,994, **Status:** Application Submitted. I successfully answered the 1st round RFI about our project and have been given an update on the schedule by EDA staff: Regional evaluations will take about two more months, if we are selected from the Regional pool, the National evaluation and selection round will take about 6-months. *I was told that EDA received 3X the number of projects that they can fund. We are currently complying with a "Request For Information" request from the EDA review committee, due September 21st. This is a good sign that we are still in the running.

Chestnut Neighborhood/ MSD School Campus Distribution Line and Booster Pump Replacement Project, Budget Total: (\$513,500.00) **Source:** FY2024 FEMA/BRIC selected Sub-application. **Status:** The BRIC program has been reinstated after being canceled in February of 2025. Working with a grant consultant

from Verdantas Engineering we have revised the proposal to meet the new eligibility requirements and it has been resubmitted.*

Additional 300,000-gallon Water Storage Tank Project, Budget Total (TBD) **Source:** FY2022 FEMA/BRIC selected Sub-application. **Status:** The BRIC program has been reinstated after being canceled in February of 2025. We have successfully resubmitted a revised proposal.

- **Grant Consulting Technical Assistance**, to be used for the revision, resubmittal and RFI process on the two outstanding FEMA/BRIC sub-applications, Budget total: \$15,000.00 **Source:** Ford Family Foundation **Status:** Awarded, **Update:** We used a little over \$11,000 for the FEMA/BRIC sub-applications and used the balance to pay for consulting help on our Regional Infrastructure Fund grant application. I will now close-out the grant for FFF.

- **EPA REAL WATER Technical Assistance Program**, in kind consulting on policy and managerial issues related to District staffing, Budget Total N/A (Goal Based) **Source:** Moonshot Missions <https://www.moonshotmissions.org/> **Status:** Awarded, introductory meeting held, District information package shared.

Regional Infrastructure Fund Grant Program, we have successfully submitted a grant proposal to fund the Feasibility Study and engineering for an alternative raw water source. This will be a well and Treatment equipment located on the campus of the Mapleton Community School Budget Total: \$248,400.00 * this is an all-grant award, no match funding required. **Status:** Application submitted with Letters of Support and required documentation. They will be announcing the awardees in late October or early November.

* **Note on FEMA/BRIC:** both of our two proposals are still viable. However, both are written as, no longer eligible, "Phased" projects. They both need to be completely re-written, re-formatted and have new budgets built. Instead of funding the complete projects: \$5.6M for the Chestnut Neighborhood Distribution line project and \$3.25M for the additional water storage tank, these proposals will now only be able to fund 90% Design and Engineering work.
